

# Economical. Safe. Environmentally Friendly.

# Agilix Algae Removal Treatment

## Effective Algae Removal. Organic and safe.

Agilix Algae Removal Treatment involves the customized formulation of a blend of bio-organisms to inhibit, degrade and eliminate the harmful algae such as blue algae & green algae in river water and fish pond, etc. These bio-organisms eliminate and degrade the complex substances generated by the harmful algae, and break down these harmful substances into molecules.

Harmful algae such as blue algae and green algae usually multiply in river and pond water, especially during summer period. These harmful algae form a layer of bluish-green, stinky floating foam, commonly known as “water bloom”, or “algae bloom”, which will cause the quality of water to deteriorate, leading to lack of oxygen and suffocation of fishes in the water. In more serious situations, some types of harmful algae produces toxin, which is harmful to fishes, human and livestock, and may induce cancer.

## Environmentally Friendly. No More Foul Odour.

- Remove harmful algae such as blue algae and green algae
- Total removal of any foul odour.
- Clean up and clear up the water
- 100% organic solution with no use of any chemicals.
- Prevent the generation of any toxins
- Turn the organics produced by harmful algae into useful CO<sub>2</sub>, nitrogen, oxygen, water and sulfate.
- Environmentally Friendly. No harmful substances produced.

# Organic Removal of Algae

Aerobic and facultative aerobic bio-organisms with special biodegradability included in Agilix Algae Removal Treatment are able to grow independently in river and fish ponds, and could digest the organics generated from harmful algae such as blue algae and green algae into useful substances such as sugar, amino acids and fatty acids which could be used by other species in the water.

Through digestion, Agilix International specially formulated blend of bio-organisms inhibit the overflow of harmful algae in riverway or pond, keeping the water clean and clear, and odour-free.

Agilix Algae Removal Treatment is highly concentrated, specially selected, adapted, improved microbial strains, enhances and speeds up the digestion of the organics produced, as these bio-organisms has much stronger living ability and multiply quickly.

## Usage:

Pond water, River water etc

## Standard Packaging:

Agilix Algae Removal Treatment comes in a standard 1kg container.

## Directions of use:

For the first week, add 20 grams to one ton of water every day.

For the second week, add 10 gram per ton water every day.

## Characteristics:

Performance: Light yellow to light brown free flowing powder

Odor: Slight fermentation odor

Bacteria count:  $1 \times 10^9$  cfu/ g (including 50% *Bacillus subtilis*, 30% *Bacillus licheniformis*, and 20% *Bacillus polymyxa*)

Moisture: <8.0%
