

Economical. Safe. Environmentally Friendly. Agilix Odour Buster

Effective Odour Removal. Organic and safe.

Agilix Odour Buster provides for a customized blend of bio-organisms package to selectively promote growth of desirable bacteria for waste breakdown and inhibiting odour-causing species. These bio-organisms removes organic wastes that block pipes, cause bad odour, or cause hygiene problems and pollution.

For clients from restaurants, hotels, commercial premises, industrial facilities to wastewater facilities, and garbage depository centres, it requires only a few days, after the application of Agilix Odour Buster, to deodorize the places naturally, with its multi-million bio-organic treatment.

At Agilix International, we provide an innovative and effective odour removal solution with Agilix Odour Buster which uses organic bio-organisms to treat odour beyond conventional odour treatment. These bio-organisms are natural, and not genetically engineered, and there is no need for chemicals or big equipment to remove the odours.

Environmentally Friendly. No More Foul Odour.

- Highly concentrated formula of bio-organisms.
- Total removal of any foul odour.
- Naturally deodorize in just days
- 100% organic solution with no use of any chemicals.
- Long term money-saving solution with no maintenance needed.
- Easy application. Just apply and leave over-night or during downtime.

Tested by the following authorities:

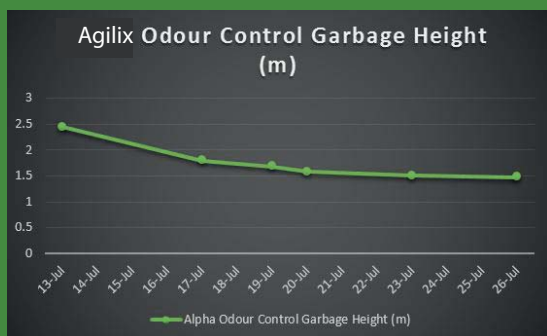

Organic Removal of Odours

It is very common to get a very foul smell when walking past garbages, toilets, drainage, wastewater facilities, and kitchens. This is due to the decomposition of wastes, mostly organic wastes from leftovers or food waste, causing unbearable smell.

Agilix Odour Buster is specially formulated with over 1 Billion natural bio-organisms, which are 100% natural, and not genetically engineered. These bio-organisms are our key to eliminating the foul odours with natural means of decomposition, where they thrive on “swallowing” food waste molecules.

These bio-organisms are friendly and safe to humans and animals. They multiply and double every 30 minutes and are a group of extremely hardworking “workers” which will eat every minute, removing the foul odours, enabling a deodorized environment in just days.

Recommended Applications:

Residential & Commercial

Restaurants & Hotels

Industrial Facilities

Wastewater Facilities
