

Bio-Organic, High Nutrients, Odourless Agilix Soil Reversible

Agilix Soil Reversible

The most important element for having high yielding crops, bountiful fruits and fertile land is to maintain a healthy, deep and rich organic soil.

Agilix Soil Reversible is an organic fertilizer that rectifies and promotes deep and rich organic soil by remediating the soil and restoring it to a healthy condition.

Choose Organic, Not Chemical Fertilizers

Agilix Soil Reversible feeds your plants while improving the soil condition. Soil with lots of organic material holds more moisture and nutrients which foster growth of soil organisms and promote healthier plant roots.

A chemical fertilizer nourishes the plant but harms the soil in the long term. When chemicals are used, the soil gradually loses its organic matter and microbiotic activity. Overtime, the soil structure deteriorates and become lifeless. This in turn will be detrimental to the environment; destroying natural habitats, wildlife and contaminating groundwater.

Benefits:

- Revive polluted and “dead” soil – cut resting of ground=higher profits
- Improve moisture retention – cut irrigation costs, increase yield
- Lower cost than chemical fertilizers
- High nutrients growth - increase yield by more than 30%
- Treat and prevent plant diseases

How Agilix Soil Reversible works?

Agilix Soil Reversible works at the root level when mixed with the soil. The microbial inoculants is activated by watering of the plant. The organic catalyst within Agilix Soil Reversible encourages the entire root system to grow healthier and hence improves the absorption of water and nutrients much more effectively.

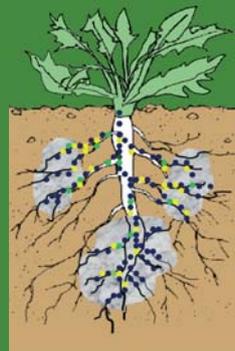

At the same time, the micro-organisms in Agilix Soil Reversible stimulate the soil and convert organic matters hence increasing fertility. The slow release of nutrients ensures long term fertility of the soil that encourages life such as earthworms to return. This ecological cycle further increases valuable nutrients for the ground and plants.

1. Soil Reversible works at the root level.

2. Activate Soil Reversible by watering the plant.

3. Encourages root hairs to grow enabling plants to absorb more water and nutrients.

Recommended Applications:

Plantation (600-900kg / Acreage)

Paddy, Corn, Sugar Cane, Watermelon, Pineapple, Grapes etc.

Orchard / Trees (1-5kg / Tree)

Palm Oil Tree, Mango, Durian, Papaya, Banana, Guava, Orange etc.

Open Field / Grassland (500-1000kg / Acreage)

Golf Course and Green Field.
